Re: Application for Winter 2025 Co-op: Quality Assurance Specialist Position at CGI

Dear Hiring Manager,

I am excited to apply for the Winter 2025 Co-op: Quality Assurance Specialist position at CGI. Currently pursuing a Master of Applied Computing at the University of Windsor, I have developed a strong foundation in software testing, debugging, and automation, and I am enthusiastic about the opportunity to contribute to CGI's Quality Assurance team.

Through academic projects and internships, I have gained hands-on experience in software development, including building a distributed file system in C using Linux socket programming, and developing machine learning models. Additionally, I have experience creating reports and dashboards, which aligns with the role's responsibilities of supporting testing management and Key Performance Indicators. These experiences will allow me to assist in documenting defects and collaborating with the development and business teams for defect resolution.

During my internship, I developed real-time IoT dashboards using cloud platforms, which required rigorous testing and debugging to ensure functionality. I also worked with MQTT protocols for device communication, sharpening my ability to analyze logs, debug issues, and manage automation workflows. I am confident these skills will allow me to contribute effectively to your team's testing process.

I am drawn to CGI because of its focus on collaboration and innovation. I look forward to leveraging my skills to contribute to CGI's projects while gaining valuable industry experience.

Thank you for considering my application. I look forward to the opportunity to discuss how my experience aligns with CGI's goals.

Sincerely,

Dhaval Khunt
